

background-color	Sets the color of the background of an element.
color	Sets the color of the subject of an element.
width	Sets the width of an element.
height	Sets the height of an element.
border/padding/margin	Sets the gaps/spacing on the sides/exterior of an element.
z-index	Sets the order (from back to front) that elements appear on screen.
text-align	Sets where on the screen the text in your element will appear (left, center, or right).
font-size	Sets the size of the text in your element.
font-weight	Sets the boldness of the text in your element.
font-family	Sets the font used for the text in your element - can be used to execute imported font files.
line-height	Sets how much space a line of text takes up horizontally.
border-color	Sets the color of the outline around an element.
background-blend-mode	Allows the hover color of an element to appear on top of the background image.
display: flex	Turns a container into a flex container, allowing you to easily manipulate the elements inside.
flex-direction: row	Arranges the flex items within a flex container horizontally.
position	Sets how an element is positioned within it's container and affects how the element can be moved, either within or outside of normal document flow.
flex-wrap	Allows the flex items to split into multiple lines according to the viewport.
align-content	Aligns each line of flex items to the start of the container.

flex	Sets how a flex item will grow, shrink, and what it's base size should be within a flex container.
background-image	Sets the background of an element to an imported or online image.
border-radius	Used to round the corners of (default rectangular) elements to create cards and circles.
Background-size: cover	Sets the background image to cover the background of an element for proper sizing
background-position	Allows you to move the background image horizontally to properly center the image within the card.
top	Moves the element lower on the screen as the number grows.
left	Moves the element further from the left of the screen as the number grows.
@font-face	Executes an imported font file.
@media (max-width)	Media Query: helps make your website responsive, meaning it looks good and works well on all devices
